

# H<sub>2</sub>S Alive

## Energy Safety Canada

**Course Duration:** 1 Day

**Who Should Attend?**

This course is designed to reduce accidents and injuries from working with or in close proximity to hydrogen sulfide (H<sub>2</sub>S). This program is for personnel who work in or around oil and gas or production areas where H<sub>2</sub>S is present. The purpose of this program is to ensure students understand the risks associated with H<sub>2</sub>S so as to minimize potential workplace hazards. This course meets the requirements of the Canadian Association of Petroleum Producers (CAPP) guidelines for working in H<sub>2</sub>S environments in the oil and gas sector.

REL's training program and instructors are Energy Safety Canada (formerly ENFORM) Approved and Certified.

**Curriculum Topics Include:**

- H<sub>2</sub>S Properties, Health Hazards and Locations
- Hazard Assessment and Control
- Respiratory Protective Equipment (SCBA/SABA)
- Detection of H<sub>2</sub>S
- Initial Response Strategy

Note: Participants required to bring Personal Protective Equipment.
